The Discovery of the Water Made by Party While Exploring a Cave in the Mountain-Illumination of the Subterranean Chamber.

It will be remembered that the discovery of the water was made by a party which explored the large cave, which is which explored the large cave, which is entered near the water's edge near the Nashville & Chattanooga bridge. This party, by dint of crawling and creeping on all fours through ditches, gulleys, and over streams, along fathomless abysses and near yawning chasms, entered a gigantic don shaped chamber, from the roof of which powered with a rear life thus. of which poured, with a roar like thun-der, a mountain stream, ice cold and clear as crystal. By original experiments with lighted balloons, the altitude of the cham-ber ascertained and the stream was located. The surface of the mountain was then cross-sectioned, levels run, and finally a spot was located under which the engineers stated the stream would be

The surface of the mountain at that point is solid limestone, hard as adamant and perfectly compact. Undeterred by such obstacles, the work was begun, and day by day the shaft went lower until it had been sunk about forty feet, it was then the patient toil was rewarded and the qualing fountain in the bowels of the gushing fountain in the bowels of the mountain was reached. The water was found to be in even larger quantity than was anticipated, and the work of utilizing it began. It was decided to drive a tunnel from the bottom of the shaft in a notheast erly direction to the surface of the mountain. The length of the tunnel is perhaps 200 feet. It is about six feet high and five to eight feet broad. It is cut through solid stone

The shaft leads forty feet in a direct vertical line from above to a double drift which opens into the mouth of the chamber into which the stream pours and connects, in a direct line with the flow of the stream, with the tunnel of stone, which opens on the face of the mountain about fifty feet below the top of the shaft. Imagine a mighty inverted "L" and you have a general aspect of the work. The leg is the shaft; at the point where the leg intersects the arm is the roof of the chamber, into which the stream pours; the left arm represents the natural flow of the stream from the bowels of the mountain, and the which opens into the mouth of the cham represents the natural now of the stream from the bowels of the mountain, and the right arm represents the tunnel into which the water will be conducted. The water is as clear as any mountain spring, absolutely transparent, and icy cold. It flows quite rapidly, the dimensions being about four inches in depth and two and was half to four feet in width to the conduction. one-half to four feet in width. It describes a semi-circle at the foot of the shaft and then pours into the mighty

The scene is one of surpassing grandeur and was beautifully illuminated by Mr. Anderson with saturated cotton balls and colored lights. The chamber is domeshaped, fully 230 feet in depth. A huge bowlder was pitched into the inky blackness into which the stream poured and ness into which the stream poured and seven seconds elapsed before it struck bottom. It fell with a thud that was distinctly audible above. Mr. Anderson sus-pended burning cotton balls in this chamber, and it was lighted up brilliantly near the top, but all was inky black in the fathomiess depths below. The stream seems to flow tardily before it reaches this mighty subterranean precipice as if in horror and then dashes over the well-worn rocks, gurgling, hissing, and seething, and is lost in darkness. Explorers who have visited the cave and observed all this state that the water is partially dissipated into mist before it reaches the bottom. One of the flaming balls was dropped into the chamber. It flared up the ceilings bespangled with diamonds, the walls which supported the mighty pillars and gigantic columns were visible for a half second, and down, down went the flaming torch, hisswater is partially dissipated into As supplied to the principal amilles in Honolalu, and fore it reaches the bottom. One of exclusively to fier Britannic Majesty's vessels of war. ing in the mist of the waterfall, turning and twisting in its terrible descent, until it was again lost in darkness.

An expert in water-works, who thoroughly understands its volume and veloc ity, states that the flow of water from that stream alone will exceed 1,500,000 gallons every twenty-four hours. Some little distance from the main stream another stream has been discovered. It is the intention of Mr. Anderson to tunnel to the second stream and unite it with the mair body of water. He says it is fully one-third as large as the main stream, and, ac-cording to the estimate of the expert, that would increase the total flow to 2,000,000 gallons daily. Steps will be at once taken to unite the streams. The tunnel will be enlarged and cemented, and the flow of water diverted from its old channel into the mouth of the tunnel, and a reservoir with 5,000,000 or 6,000,000 capacity will be created. The water will be conducted from the cave_through twenty-inch mains to the city.—Chattanooga Times.

The Brooklyn Bridge After Dark. The best evening's exercise I know of for a man who likes to walk is a stroll across the Brooklyn bridge and back. There is ozone enough in the trip to insure anyone a healthy sleep and an appetite for breakfast. It is about two miles over and back, with a superb track to walk on, and half the distance is a magnificent pano-rama. The river above the bridge, with its wharf and ferry lights in all colors, clustering as close as fireflies, is like Venice at carnival time. The black harbor below the bridge, with its glimmering ship's light here and there, is a mine of roman-tic mystery. New York itself, with the ghostly filmmer of the electric lights lighting the sky over it, is another picture to
remain long in the memory. Still another
memorable one is the perspective of the
bridge itself, from tower to tower, with

Manager the huge cables and the interlacing sup-ports and guy wires, all sharply outlined in white against the black sky, converging to the point of sight like an immens spider's web.—New York News "Babble.

No Slugger, But a Sprinter. One day recently a gentleman stepped into a Cincinnati hotel to make a call. H placed his umbrella in the rack before he went up to the hotel parlor, but being of a facetious turn of mind he pinned a card

on the umbrella, which read: "This umbrella belongs to a man who can hit a 250 pound blow. Will return in ten minutes." He made his call, and when he returned

his umbrella, lo, it was gone. But in its place found a neat card, upon which was "This card was left by a man who walks twenty miles an hour. Will not return."—

The DAILY HERALD will furnish a fresh and readable record of events in city and country. It will also give, from time to time as received, a summary Hard and Soft Wood, Sawed and Split, always on hard, and sold in quantities to suit. of the latest news from the outside world, in concise and systematic form.

The Datty Herald will follow a straightforward, consistent, independent and moderate course in the discussion of public affairs. It will not be the servile organ of any clique, faction or party. At the same time an earnest support will be given to measures promotive of the public welfare, and to individuals or organizations that may appear in the political field, with claims to popular confidence backed by worthy records and unassailable principles.

The undersigned would, however, rather point to his record as a journalist in this city for the past two years, as conductor of the Daily Bulletin, than make promises that, in general estimation, are valueless until justified by performance. He can only pledge himself to do his best to produce a thorough, an influential, and in every way acceptable, daily newspaper.

Try the "Daily Herald" for a month at least.
